

Dermaplaning

Dermaplaning is a non-invasive procedure that gently removes the top layer of skin to leave it looking smooth, vibrant and hair-free. The practice of dermaplaning has been around for more than 40 years, originally taking place in plastic surgery offices, but today it has gone mainstream. Aestheticians throughout the United States perform dermaplaning procedures everyday.

For this reason the blade industry has developed specific blade shapes to improve the safety of the procedure. At Cincinnati Surgical we offer blades size 10, 10R and 14, developed by Swann-Morton specifically for this industry.

#10

SM Steel Blade Size 10
packaged 100/box
00SM10: sterile, carbon
01SM10: sterile, stainless

#10R

SM Steel Blade Size 10R
